MacOS1. Field of the Invention The present invention relates to a method and apparatus for soldering electronic components onto a printed circuit board. More specifically, this invention relates to a solder pot employing a controlled wave action to provide a substantially equal distribution of solder across a printed circuit board and to direct solder to flow directly onto conductive areas on the board.

2. Description of the Prior Art The conventional method of soldering electronic components onto a printed circuit board is illustrated in FIG. 1. A printed circuit board 10 is placed on a conveyor 20 which is set to move through a solder pot 30. The solder pot is typically a cylindrical metal housing having a funnel shape. The conveyor 20 feeds the printed circuit board 10 into a central opening 35 and transports the board into the solder pot. Inside the solder pot 30, a reservoir 40 of molten solder is maintained at a predetermined temperature by a heating element 50 which surrounds the reservoir 40. A solder bar 60 is attached to the bottom of the solder pot 30. The solder bar 60 is positioned so that the solder flows in a generally downward direction onto the printed circuit board 10 as it is drawn into the solder pot 30. As the conveyor 20 draws the printed circuit board 10 through the solder pot, the solder on the board becomes more solidified. The temperature of the solder pot 5b5f913d15

AutoCAD [Mac/Win] [Latest-2022]

Q: pass image from static to dynamic with unknown path I am currently learning about swift and iOS and i am trying to display images stored in the "Resources" of the app in my view. I have followed the tutorial found here but it seems to not work. When the function load_image is called it will either show a "could not open the image" or just show a default image stored in the project (which is the best option for now). What i am after is that when the function is called the image should get replaced with a different image in the app but that does not seem to work. func load_image() { var url = NSBundle.mainBundle().URLForResource("bunny", withExtension: "jpg") if let url = url { img = UIImage(named: "bunny") imageView.image = img println("img : \(img)") } else { println("could not open the image") } } This is the function that gets called from a segue of the prototype cell func tableView(tableView: UITableView, didSelectRowAtIndexPath indexPath: NSIndexPath) { if (tableView == self.view.window!.rootViewController as UITableView) { let indexPath = tableView.indexPathForSelectedRow() var controller = UINavigationController() controller.viewControllers = [UIImageViewController(nibName: "UIImageViewController", bundle: nil)] controller.pushViewController(self.view.window!.rootViewController, animated: true) self.view.window!.rootViewController = controller self.view.window!.makeKeyAndVisible() load_image() } } A: You are trying to load the image from the main bundle, but your image is probably located in the app
